1. General Overview

This is a document in SBML Level 2 Version 3 format. This model was created by the following two authors: Catherine Lloyd¹ and Lukas Endler² at November seventh 2008 at 3:03 p. m. and last modified at June 24th 2009 at one o’ clock in the afternoon. Table 1 provides an overview of the quantities of all components of this model.

Table 1: The SBML components in this model.
All components are described in more detail in the following sections.

Element	Quantity	Element	Quantity
compartment types	0	compartments	1
species types	0	species	26

Model Notes

This is a model of the coupled Natch, Wnt and FGF modules as described in:

A. Goldbeter and O. Pourqui, Modeling the segmentation clock as a network of coupled

¹University of Auckland, c.lloyd@auckland.ac.nz

²EMBL-EBI, lukas@ebi.ac.uk

oscillations in the Notch, Wnt and FGF signaling pathways. *J Theor Biol.* 2008 Jun 7;252(3):574-85, pubmed ID: [18308339](#)

To uncouple the modules remove the reaction `MAX_trans_Xa` and set `vsFK=vsF`.

The SBML version of the model was converted from the CellML [version](#) by Catherine Lloyd for the [CellML repository](#).
